

signal light emitted from a laser light-emitting element passes through a first optical waveguide and a second optical waveguide to strike a transmitting/receiving medium such as an optical fiber, and a signal light from said  
5 transmitting/receiving medium passes through said second optical waveguide and is received by a light-receiving element, said optical waveguide module comprising:

a light-blocking plate, disposed above said first optical waveguide, which blocks transmitted signal light  
10 missing said light-emitting coupling part coupling said laser light-emitting element and said first optical waveguide.

6. An optical waveguide module according to claim 5, wherein said light-blocking plate comprises a characteristic of either absorbing or reflecting light incident thereto.
